

BETH Standard Electrostatic Precipitator

BETH® Standard Electrostatic Precipitator

For de-dusting of larger gas volumes, BETH® offers standard electric filters in different sizes.

Low-priced

Through the standardized design, these filter types can be offered particularly low-priced. Pre-assembled The sizes, which have been preassembled for the most part, enable a low-priced and quick on-site assembly.

Available

The extremely robust and simple construction as well as sophisticated integrated detail solutions secure high availability and a particularly long durability.

Resistant

Built for gas temperatures up to about 420°C.

Energy-efficient

In contrast to filtering precipitators, the BETH®-standard electric filter has very low energy costs. Through using state-of-the-art high voltage control engineering, the BETH electric filter additionally distinguishes itself by an outstanding conduct of precipitation.
